

PROFESSIONAL SUMMARY

Junior DevOps Engineer with hands-on experience in **AWS, Terraform, Kubernetes, Docker, GitHub Actions, Linux**, and monitoring tools. Built **production-style cloud infrastructure** with automated **CI/CD pipelines** and Kubernetes autoscaling. Passionate about delivering **secure, scalable, and reliable cloud solutions** while growing as a DevOps and Cloud Engineer.

EDUCATION

Er. Perumal Manimekalai College of Engineering B.E. Computer Science Engineering; CGPA: 8.05 /10	Hosur, TN 2022 - 2026
Sri Vijay Vidyalaya Mat. Hr. Sec. School Class XII - Computer Science; Perc.: 75.83%	Hosur, TN 2021 - 2022
Sri Vijay Vidyalaya Mat. Hr. Sec. School Class X; Perc.: 86%	Hosur, TN 2019 - 2020

SKILLS SUMMARY

- **Languages:** Python, Bash, SQL
- **Cloud Platform:** AWS (EC2, IAM, VPC, EKS, ELB, S3), GCP
- **Containerization & Orchestration:** Docker, Kubernetes
- **CI/CD Tools:** GitHub Actions, Jenkins, Helm
- **Version Control:** Git, GitHub
- **Operating System:** Linux (RedHat), Ubuntu
- **Infrastructure as Code:** Terraform, AWS CloudFormation
- **Monitoring & Logging:** Prometheus, Grafana

INTERNSHIP EXPERIENCE

DevOps Engineer Intern | Besant Technologies

ON-SITE | Dec 2025 - June 2026

A technology training and staffing company specializing in cloud computing, DevOps, and software development

- Gained hands-on experience with **AWS core services**, including cloud infrastructure setup, deployment, and management
- Worked with **Docker** and **Kubernetes** for containerization and orchestration of cloud-based applications
- Developed proficiency in **Linux administration** for server management, shell scripting, and cloud environment configuration

AWS Cloud Architecting | AWS Academy

VIRTUAL | July 2025 - Aug 2025

A globally recognized cloud computing program by Amazon Web Services covering core architecting principles and AWS services

- Completed **60 hours** of structured **AWS** training covering core services, cloud architecture, security, and cost optimization
- Gained hands-on skills designing **scalable, highly available systems** using **EC2, VPC, S3, IAM, and Load Balancers** on AWS

PROJECTS

Autoscaling Web Application on AWS EKS | Terraform • Kubernetes • Docker • GitHub Actions | [Github](#)

A cloud-native DevOps project focused on scalable infrastructure automation

- Provisioned AWS infra (**VPC, EKS, EC2, ALB**) using **Terraform** IaC; deployed containerized app on **multi-node EKS cluster in 2 AZs**.
- Configured **Horizontal Pod Autoscaler (HPA)** to auto-scale pods **2-10** by CPU/memory; remote state with **S3, DynamoDB**.
- Automated **CI/CD** pipeline using **GitHub Actions** to build, push Docker images to ECR, deploy to EKS with **zero-downtime** updates

Secure Student Onboarding Data Pipeline | GCP • Terraform • Django REST Framework • Gitleaks • BigQuery | [Github](#)

Secure student onboarding pipeline with automated data validation, secret scanning, infrastructure validation, and fail-closed CI/CD.

- Built a **secure GCP data pipeline** using Terraform, Google Cloud Storage, BigQuery, Django REST Framework, and least-privilege IAM for controlled student onboarding data processing.
- Implemented **5-field DCYN** strict Boolean validation and **2 cross-field** business rules, while automating **4+ CI/CD quality** and security gates with GitHub Actions, Gitleaks, Python testing, and Terraform validation, including fail-closed quarantine logic.

Three-Tier AWS Infrastructure | Terraform • AWS VPC • EC2 Auto Scaling • RDS • Secrets Manager • ALB | [Github](#)

Modular three-tier architecture on AWS with isolated networking, auto-scaled compute, and a zero-exposure private database tier.

- Designed a modular **three-tier AWS architecture** with **Terraform**, cleanly separating networking, compute, and database layers.
- Secured every tier with **least-privilege security groups**, IAM-based SSM access, and **Secrets Manager** credential storage.
- Automated remote state locking, **Auto Scaling**, and **RDS** provisioning to build a scalable, teardown-friendly AWS environment.

CERTIFICATION

AWS Academy Cloud Architecting – AWS Academy Graduate | [Certificate](#)

- Completed **60 hours** of AWS Academy Cloud Architecting training, gaining hands-on experience with **EC2, VPC, S3, IAM, and Load Balancers**, along with cloud architecture design, security, scalability, high availability, and cost optimization

DevOps Foundations – LinkedIn Learning (CompTIA) | [Certificate](#)

- Completed **DevOps Foundations** training via LinkedIn Learning, an Authorized CompTIA Partner program, gaining foundational knowledge of DevOps culture, **CI/CD workflows, automation**, and collaborative software delivery practices

Implement Load Balancing on Compute Engine – Google Cloud Skill Badge | [Certificate](#)

- Earned **Google Cloud skill badge** by writing gcloud commands, deploying VMs on **Compute Engine**, running containerized apps on **GKE**, and configuring network and **HTTP load balancers**
